## **TOYOTA AVALON GETS PBR BRAKES**

The face-lifted Toyota Avalon just released to the Australian market comes complete with a nice surprise when you put your foot on the brake pedal – a PBR brake system. Whilst many of the enhancements for this revitalised model are focused on improving aesthetics, the change in brake system will deliver an increased level of confidence for Avalon drivers.

The new Avalon brake system comprises PBR front and rear disc rotors, PBR front and rear brake calipers and the patented PBR Banksia single-shoe park brake. All of which are locally manufactured on state-of-the-art equipment at PBR's Melbourne production facility.

One of the features of this package is the introduction of an aluminium rear caliper offering weight savings over the earlier system. The addition of the Banksia park brake, following its debut with Toyota on the latest model Australian Camry, is testimony to the advantages that can be gained using PBR brake system technology.

PBR has been supplying Toyota Australia with brakes for the current model Camry since September 2002 and have developed a working relationship that has included developing specialist brake systems for vehicles such as the Crossrunner concept car displayed at the 2003 Melbourne Motor Show.
